Date & Time Basics

How Excel sees dates and time

Dates Are Numbers

Excel stores a date as a serial number (1 = 1 Jan 1900). Formatting makes it look like a date.

Time Is a Fraction

Time is part of a day. 0.5 = 12:00 PM and 0.25 = 6:00 AM.

Date Parts

Month, Day, Year together make a date. Format: MM-DD-YYYY.

Time Parts

Hour, Minute, Second and AM/PM together make a time.

TODAY & NOW

Live date and time formulas

`=TODAY()`	**Current date (live)**
`=NOW()`	**Date + time (live)**
`=TODAY()+7`	**7 days from today**
`=NOW()+7`	**7 DAYS later**
`=NOW()+7/24`	**7 HOURS later**

Formulas update every day. Shortcut keys insert a fixed value that never updates. Adding 1 adds a whole day, so use /24 for hours.

Date & Time Shortcuts

Fixed values, instantly

Insert today's date (fixed)	Ctrl + ;
Insert current time (fixed)	Ctrl + Shift + ;
Date format	Ctrl + Shift + #
Time format	Ctrl + Shift + @
Format Cells > Custom	Ctrl + 1
Recalculate TODAY / NOW	F9

Date + time together: press Ctrl+; then a Space, then Ctrl+Shift+;. These values stay fixed, so use them for records like "entry date".

TEXT with Dates & Time

Show them your way

```
=TEXT(TODAY(),"mm-dd-yyyy")
```
10-18-2026

```
=TEXT(NOW(),"h:mm AM/PM")
```
4:33 PM

```
=TEXT(B6,"ddd")
```
Mon

```
=TEXT(A1,"AM/PM")
```
AM

```
=TEXT(TIME(17,10,4),"h:mm:ss AM/PM")
```
5:10:04 PM

B6 = 14-05-2012, so "ddd" gives Mon. A "mm" next to hours means minutes. Elsewhere it means months. The result of TEXT is text, not a real date.

Date Format Codes

Use inside TEXT or Custom format

dd	18
ddd	Sun
dddd	Sunday
mmm	Oct
mmmm	October
yyyy	2026

Example date: 18 October 2026. Combine them freely, like dd-mmm-yyyy for 18-Oct-2026.

DAY 9 | EXCEL

DAYS & NETWORKDAYS

Count days between two dates

`=DAYS(D33,C33)` — **5 (end date first!)**

`=NETWORKDAYS(C33,D33)` — **4 (skips Sat, Sun)**

`=NETWORKDAYS(C33,D33,F2:F3)` — **+ holidays**

C33 = 10-04-2026 (Fri) and D33 = 15-04-2026 (Wed). DAYS counts every day. NETWORKDAYS counts only working days (Fri, Mon, Tue, Wed = 4). F2:F3 is your holiday list. Lock it with $ when you copy the formula down ($F$2:$F$3).

NETWORKDAYS.INTL

Your own weekend

Syntax

=NETWORKDAYS.INTL(start, end, weekend, holidays)

Weekend String

7 digits for Mon to Sun. 1 = day off, 0 = working day.

Example

"0000011" = Sat and Sun off. "1010000" = Mon and Wed off.

Full Formula

=NETWORKDAYS.INTL(B54,C54,"1010000",$A$54:$A$55)

DAYS360

A 360-day year

Idea

Every month counts as 30 days, so a year has 360 days.

Syntax

=DAYS360(start, end, method)

Method 0 or FALSE

US method (default).

Method 1 or TRUE

European method.

WORKDAY

Find a target date

`=WORKDAY(DATE(2026,10,28),7)`	06-Nov-2026
`=WORKDAY(B33,30)`	30 working days later
`=WORKDAY(B33,-5)`	5 working days back
`=WORKDAY(B33,30,F2:F3)`	Skips holidays too
`=WORKDAY.INTL(B33,30,11)`	Only Sunday off

Resign notice: start + 30 = 30 calendar days. WORKDAY(start, 30) = 30 working days. NETWORKDAYS counts days between dates. WORKDAY finds the date. Format the result as a date (Ctrl+Shift+#).

EDATE & EOMONTH

Due dates and month ends

`=EDATE(B33,2)` **18-Dec-2026**

`=EDATE(B33,-1)` **18-Sep-2026**

`=EOMONTH(B33,0)` **31-Oct-2026**

`=EOMONTH(B33,2)` **31-Dec-2026**

B33 = 18-Oct-2026. EDATE: if you borrow Rs. 5000 on 18-Oct and return after 2 months, the due date is 18-Dec. EOMONTH always gives the last day of the month. Great for trackers.

DATEDIF & YEARFRAC

Age and time between dates

`=DATEDIF(A1,B1,"Y")`	21 years
`=DATEDIF(A1,B1,"M")`	263 months
`=DATEDIF(A1,B1,"YM")`	11 months (ignore years)
`=DATEDIF(A1,B1,"D")`	8018 days
`=YEARFRAC(A1,B1)`	21.9555...

A1 = 04-11-2004 (DOB) and B1 = 18-10-2026 (today). DATEDIF is a hidden function, so Excel gives no tooltip. The start date must be earlier than the end date.

WEEKDAY & WEEKNUM

Day and week of the year

`=WEEKDAY(B33)`	6 (Sunday = 1)
`=WEEKDAY(B33,2)`	5 (Monday = 1)
`=WEEKNUM(B33)`	15
`=ISOWEEKNUM(B33)`	15 (ISO weeks)
`=TEXT(B33,"dddd")`	Friday

B33 = 10-04-2026 (Friday). WEEKDAY gives the position in the week. WEEKNUM gives the week of the year. Use WEEKDAY(date,2) if your week starts on Monday.

Text to Date & Time

Convert and build

`=DATEVALUE("09-Apr-2026")`	46121
`=TIMEVALUE("10:30 AM")`	0.4375
`=DATE(2026,10,18)`	18-Oct-2026
`=TIME(17,10,4)`	5:10:04 PM

DATEVALUE and TIMEVALUE turn text into real numbers. Format the cells as Date or Time to see them properly. DATE and TIME build a value from separate numbers.

Pick Out the Parts

Year, month, day, hour...

`=DAY(B33)`	10
`=MONTH(B33)`	4
`=YEAR(B33)`	2026
`=HOUR(B2)`	17
`=MINUTE(B2)`	10
`=SECOND(B2)`	4

B33 = 10-04-2026 and B2 = 5:10:04 PM. HOUR uses the 24-hour clock, so 5 PM is 17.

Day 9 Cheat Sheet

All functions in one place

Live

TODAY, NOW

Build

DATE, TIME

Pick Parts

YEAR, MONTH, DAY, HOUR, MINUTE, SECOND

Day and Week

WEEKDAY, WEEKNUM, ISOWEEKNUM

Differences

DAYS, DATEDIF, YEARFRAC, DAYS360

Working Days

NETWORKDAYS(.INTL), WORKDAY(.INTL)

Move and Convert

EDATE, EOMONTH, DATEVALUE, TIMEVALUE, TEXT

Day 9
Done!

Date and time formulas.

Can you calculate your age with DATEDIF?
Tell me in the comments.
