Day 11

Sum if → Sum + if

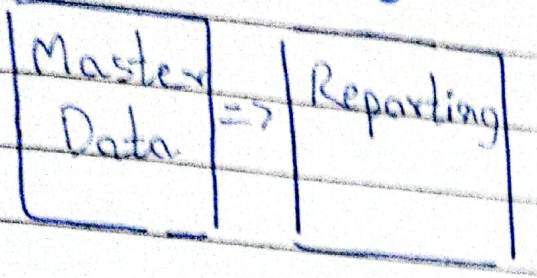

Total of — As per any → Perform
Any range — one condition — Sum but using condition

Ex — Sales - 100 rows

 → 10 parties → Mr. X → Total sale

B2B — Filter is helpful for small parties data if 100 parties so it is very strengthful because parties buy things in chunks form so sum if helpful

- Sumif (Range, Criteria, Sum range)

Range → Search the name. So we search name for party we use Master Data to find Party Name column

Criteria => To find the answer (Reparting - Name (Mx.x))

Sum Range → Which value to perform the sum (Master Data → Amount column) → sum

Range — criteria

Sum if → select all party → F4, → party name,
→ all sales → F4 → Enter
Sum range

Average if

It find average sales of each party same formula but sum if → Average if

Count if

It calculate How many time party come.

= countif (Range, criteria)

DATE _____ DAY M T W T F S S

ATTENDANCE TRACKING SYSTEM

MICROSOFT 365

Select Box → DATA → INSERT CHECK BOX
