Day 2

FORMULAE :-

excel → Function → predefined for calculation
↓ ↘ Formula → Mannual
(=) → Treat Formula and operator

Suppose you write = in A1 and Then go to any cell using mouse or keyboard or write cell number in A1 like example you go B2 so if you write anything it will apply same in A1

- Add => =+ , Multiply => =* , Subtract => =- , Divide => =/

Construction → Number, Text, character, Cell Reference

	A	B	C
1	100	200	=100+200 or =A1+B1

↓ not change dynamically

↓ Change dynamically

- Cell Movement & Enter

Ctrl+ Home => A1 , Ctrl+ End => last used cell
Ctrl+ ↑ => current region Top or Bottom
↓
Ctrl+ ← → current region left or right
specific cell Ctrl+ G

Sum
A2+5 = A1+5 ... A+5 = 5

	A	B	C
1			
2	5	5	10
3	10	10	20
4	15	15	30
5	20	20	40

Apply formula Automatically

A3+5

A4+5

= Sum then click tab then **select** cell A2, B2 or use keyboard as Enter or Tab it apply and click on Border Both Total

= Sum(A2:B2) or = Sum(A2,B2)

or = Sum(A2:C2) → Range

A2+B2+C2 → It means

you can select cell or usko neechay ki taraf lag jaan formula automatically apply or simple technique for column sum

5
10
15

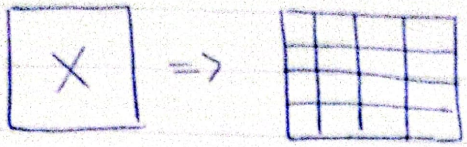

Alt+= Auto Sum, lagatar range likhi hui hain us cell main neechay jaon. Hold Alt + press = formula came then enter Total shown = Sum(A1:A3)

=Sum(A1,A3) → It shown wrong answer

=Sum(A1:A3) → This is **correct**

- Multiplication use product for range
  = PRODUCT(A2:C2) = A2*B2
  ↳ Range
- Subtraction
  = A2-B2
- Division
  = A2/B2
- MAXIMUM
  = MAX(A2:C2)
- MINIMUM
  = MIN(A2,C2)

Count Formulae:

=> Number, other than No, Blank

Count CountA CountBlank

Select Cells Multiples

Hold Ctrl + then click cells Then any operation perform delete .It delete.

And If you write in one same apply in other so write anything then press Ctrl + Enter .It apply same

(A1,C1,D1) <= Ctrl+G we used for select cell and write 0. If apply all using Ctrl+Enter

Ctrl+H It is used for to replace.

Ctrl+C for copy & paste Ctrl+Alt+

Values (V) => Only result paste

Formulas (F) => Only formulas paste

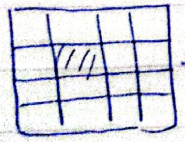

Formats (T) => Only Formatting just like colour, Borde

All (A) => Data, Formulas, Formatting

Transpose (E) => Rows -> Columns & Columns -> Rows

Multiply (M) => Destination cells ka copied value say multiply

Conditional Formatting :- -> decoration

-> sale more than 50,000 colour it Condition applied

. Custom Formed

Number -> custom "PKR " #,##.00

"RS. " #,###0

In style section you can see conditional formatting

you select column Ctrl+Shift+↓ then go to conditional formatting then Highlight cell then apply and click on any condition

Apply multiple condition on single column And you can change custom format

- Greater than
- less than
- Between

→ Number

- contains the Text → Text

It check name it means suppose you highligh Oneeb Arif And you write Text Arif so it highlight Oneeb Arif & Amas Arif if you correct this go to conditional formatting → Manage Rules → Edit Rule → Oneeb Arif Type → ok → Its correct highlight

- A Date Occuring → Date

- Random Dates

A2 → 10/10/2026

A3 → =A2+1 → Enter

Not work if it is so second Method

=Date(2026,10,20)

- Duplicate values → Number
  - Duplicate
  - Unique

- Color Scales

- Icons
  - 80 marks-high
  - 50 marks-Medium
  - 20 mark-low

- Data Bars

20

50

80

100

Big No = lambi bar

20 Low Red

50 Medium Yellow

100 High green

Background color change of cell

- Clear rule
  - → Entire sheet
  - → selected cells

Add AI

File → Options → Customize Ribbon → Main Tabs → Developer Add it → ok

Developer Tab shown → Add ins → store → search chatgpt or claude paid → click on search icon and click on Add

Then go to Home Tab you see chatgpt sign in and use it if any operation form on any sheet or selected cells select it prompt it it apply it
