Common Mix-Ups

Easy to confuse

SUMIF vs SUMIFS

SUMIF: range, criteria, sum_range. SUMIFS: sum_range comes FIRST.

FIND vs SEARCH

FIND is case-sensitive. SEARCH is not.

INT vs TRUNC

Same for positives. INT(-5.5) = -6, TRUNC(-5.5) = -5.

NOW()+7

Adds 7 DAYS. Use NOW()+7/24 for 7 hours.

Format vs ROUND

Decimal buttons change the look. ROUND changes the real value.

Excel Errors

Day 12

#DIV/0!	Divide by 0 or a blank
#VALUE!	Wrong data type
#NAME?	Wrong function name
#REF!	Deleted cell reference
#N/A	Value not available
#NUM!	Invalid number math
#NULL!	Wrong range intersection
#SPILL!	Spill range is blocked

Golden Rules

Remember these always

Lock with F4

A1 moves, $A$1 never moves, $A1 locks the column, A$1 locks the row.

Quotes

Text goes in "quotes". Numbers and cell references do not.

Nested Formulas

Excel solves from the inside out. One closing bracket per function.

Dates

Dates are serial numbers. Format the cell as a date to read them.

Tables

Ctrl+T makes data grow, format and calculate automatically.

Practice Challenge

Try these without notes

Task 1

Total sales of one party with SUMIF.

Task 2

Build a Supplier x Month report with SUMIFS.

Task 3

Grade marks with IFS and rank them with RANK.

Task 4

Calculate age with DATEDIF and the due date with EDATE.

Task 5

Clean a name list with TRIM and PROPER, then split it with TEXTSPLIT or Flash Fill.
