Date:

Day 04

Go To Special

Move it in sheets

Enter in Namebox to write Cell number or

Home → Find & Select → Go To → Reference Type → ok

- Special is used for selection
- First select complete → Ctrl+G → special → option → choose → ok
- Constants → It means if you click any cell it shown text or number in formula bar so it is constant,
- Formulas → If formula shown so it is formula

- Formulas → values
  Ctrl+C → Ctrl+Alt+V → V → Enter
- formatting Remove
  Alt+H+E+F
- Values + formulas + formatting all clear
  Alt → H → F → A

	Constant	Formula
• Boolean/logical	True/false	True/False
• Error	#N/A constant error	= some → #Name formula Error

If you copy dates and paste so it show in integer

Select → Ctrl+shift+#

Date:

Remove Blank spaces or Rows in Data

Select All → Ctrl+G → Special → ☑ Blanks → ok → Ctrl -

- Current Array = F117:F127-G117:G127 → Group Task (Range, Array)
- Current Region → Just like Ctrl+A → complete data in block or Table that is Region
- object → Insert → Any shape click and draw in sheet
  Multiple shapes selection to work single task so object can help it. Multiple object selects at once

Row difference

It highlight different Row

1	1
2	3
3	4
5	5

] - highlight

Column difference

It highlight different column

1	2	3	5
1	3	4	5

highlight this both

Ctrl / And it is used in invoices

INV - 764512

Date:

Precedents means mujhain kis tarikay say banaya gaya hain

Suppose you create 1000 using multiply two numbers click on Number → Formula → Trace Precedents

Dependents

Yeh bana kis kah raha hain It mean If you click it directly shown arrow we create this number

Ctrl+Home → First cell Ctrl+End → last call

- Visible Cells

If you hide any cell and you copy it and paste it so visible cells are paste so solution select Data → Ctrl+G → click on visible cells → ok → copy → paste The visible cells are not paste

- Highlight the conditional formatting cells in Go To special

Paste Special

Ctrl+A → Ctrl+C → Ctrl+Alt+V → operations or any operation form in any column Suppose you a column of salary and you wand add 1000 so first click on 1000 → Ctrl+C → Select column → Ctrl+Alt+V → Add → ok

Date:

- Operations

Formula is Too headick. This is helpful
- Add . Subtract . Multiply. Divide you want perform this operations
- It is helpful in %

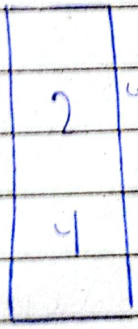

65 65 X 100 = 6500 %. 65/100 = 0.65 = 65%.
75 = 7500 %. = 0.75 = 75%.
85 = 8500 %. = 0.85 = 85%.

- Transpose
  - Horizontal to Vertical
  - Vertical to Horizontal

- Sheet change
  If you copy one sheet and paste to another and you change in second it update first paste link helpful
  - It work on sheets and workbooks

- skip blanks
  It is used for merge it

click it →
click Alt+ ↓
→ skip blanks
→ ok

copy it

1
2 2
3
4 4
5

Transpose
Ctrl + Alt + V + E → Enter

Value
Ctrl + Alt + V + V Enter

• Paste
• Formula → copy only formulas and paste it
• All → All things paste
• Formats → only paste format
or select format on data → click to copy → click on brush under the clipboard and paste it other position
• All except border → no border come
• Column width → copy with width
• Formulas & Number formats → only this come
• Values & Number format → convert to value and if is in percentage any column it same show in other area

• Find & Replace

Find → Ctrl + F
Replace → Ctrl + H
] → perform operations

• Clear
Alt → H → F
• Content (Data) - Alt → H → E → C / Delete (Data Delete only
• Formatting Alt → H → E → F only formatting remove
• All (Data+formatting) Alt H E A (All remove)

Date:

Cell Referencing

formula / function
- Number → 100+200 = 300 (fix)
- Cell → A1+B1 → keep changing
- Text or character → fix

Cell Referencing ← Fix

41	39	75	34	= 49+39+75+31 = 189
67	57	73	43	= 189 same because you drag it. wrong answer shown

=Sum (C3:F3)
=Sum (C4:F4)
=Sum (C5:C5)
=Sum (C6:F6)

This is correct shown or Use Alt+=

Cell Fix (A1)

- Types of Cell Referencing:-

A is column & 1 is row.
(To fix anything we have to apply $ sign

Row & Column not fix

1. Relative → Not Fix → A1
2. Absolute → Everything fix → A1
3. Mixed → Half-fix → $A1 → Column fix
   (Relative+Absolute) A$1 → Row fix

- Calculation of percentage

Ex

A1	B1	C1	D1
Person A	Person B	Person C	Person D
200	240	320	160

% → Total Marks obtained → 200/400 A1, 240/400 B1, 320/400 C1, 160/400 D1
Total Marks allotted 400 400 400 400

A1 B1 C1 D1
400 400 400 400
F1 = 400

= 1/2 : 3/5 4/5 2/5
= 0.50 - - -
= % .

Pg No.

Date:

Everything fix - Absolute
F1 - 400

A1	B1	C1	D1
F1	F1	F1	F1

If you use only F1 and drag it it can change so you fixed it F1 using $

F30 → 400
G32 : F30 → shown correct
G33 : F31 → not correct shown because 400 write in F30 and if you drag it F30 goes to F31 so you can fix it

G3 → 400
= G5/G3 → click F4 → you shown this - G5/G3
→ Enter

F4 not work so Fn + F4
↓
Function

Not Fix - Relative

= (G5/400)
= G6/400
= G7/400
= G8/400

correct shown if you drag it because 400 is not write in any cell or you cannot use as reference 400

% => 20
∴ 100 => $\frac{20}{100} \times 100 = 20\%$

OR

$\frac{20}{100} \Rightarrow \frac{1}{5} = 0.20 \times 100 \rightarrow 20\%$
